

2nd Supervision training at PWD-TA was held as BSPP activity

The training on Retrofit Construction and Supervision was held by the Training Academy (TA) of the Public Works Department (PWD). During the 3 (three) days training, the participants were not only the engineers from PWD, but also the engineers from other government organizations of HED, RAJUK, EED, HBRI, CDA and NHA outside of PWD. This training was the second one during BSPP Term-3, but the first trial for targeting other government engineers. Originally the technical cooperation project BSPP is focusing to PWD engineers on retrofitting technology, but the knowledge and experience during BSPP are useful for Bangladesh engineers as well, and then BSPP started the dissemination.

Since the training was the first trial, BSPP was interested in the reaction of the participants. According to the interview sheets, most of the participants were satisfied with this training, but some were not so much than expected. The participants who were not satisfied with TA training, usually engage different works from the site supervision, like building authorizers, structural engineers for design and so on. Therefore, the supervision work at sites was not so directly useful for them. But even when they were satisfied with the training, the training contents would contribute them as capacity building.

Question 1: Expectation regarding the Training Course
